

CONTENT DEVELOPMENT

Content Design Approach

We define Instructional Design:

We strive to deliver training solutions that deliver complex information and terminology in a simpler way, which makes it more understandable and easier to implement. .

DESIGN METHODOLOGY

It is the practice of creating instructional experiences which make the acquisition of knowledge more efficient, effective, and appealing. The process consists mainly of determining the state and needs of the learner and defining the end goal of the course based on a specific set of outcomes.

We develop and distribute e-Learning courses that are aligned with customer-specific needs, aimed at individual target audiences, and that support the creation and implementation of a learning culture.

The Netcampus development principles adhere to the South African Qualifications Authority quality standards, through our MICT SETA Accreditation, which is maintained through our Quality Management System when the requested material development must be aligned to Unit Standards
